A.E. ARGUE
TRAFFIC AND PLANNING STUDIES ENG.

FOREWORD

The traffic volumes listed in this booklet are the Annual Average Daily Traffic (A.A.D.T.) figures for each of the sections of highway identified. They represent the total two-way traffic volumes occurring in 24 hours on the average day of the whole year.

Local conditions may cause variations in the volume within the sections of highway listed, but on the whole these sections are considered to be adequately represented by the volumes shown. Exceptions are where the volumes are followed by a "W". This indicates that the section has a noticeable range of volume within it and the figure given is the weighted average.

Seasonal fluctuations of traffic occur on almost all sections of highway, usually resulting in higher traffic volumes in summer and lower traffic volumes in winter. The amount of variation varies considerably from section to section, from highway to highway and from area to area. It is not possible to list all these variations for every section of highway and they are mentioned here only to add to the understanding of the A.A.D.T. volumes given.

In a very general way, traffic volumes in Ontario are growing at the rate of about 5% per year. Obviously, local conditions will cause varying rates of growth to occur in different areas.

All volumes marked with an asterisk are estimates only.

FOREWORD

The traffic volumes listed in this booklet are the Annual Average Daily Traffic (A.A.D.T.) figures for each of the sections of highway identified. They represent the total two-way traffic volumes occurring in 24 hours on the average day of the whole year.

Local conditions may cause variations in the volume within the sections of highway listed, but on the whole these sections are considered to be adequately represented by the volumes shown. Exceptions are where the volumes are followed by a "W". This indicates that the section has a noticeable range of volume within it and the figure given is the weighted average.

Seasonal fluctuations of traffic occur on almost all sections of highway, usually resulting in higher traffic volumes in summer and lower traffic volumes in winter. The amount of variation varies considerably from section to section, from highway to highway and from area to area. It is not possible to list all these variations for every section of highway and they are mentioned here only to add to the understanding of the A.A.D.T. volumes given.

In a very general way, traffic volumes in Ontario are growing at the rate of about 5% per year. Obviously, local conditions will cause varying rates of growth to occur in different areas.

All volumes marked with an asterisk are estimates only.

ANNUAL AVERAGE DAILY TRAFFIC
ON THE KING'S HIGHWAYS AND
SECONDARY HIGHWAYS
IN ONTARIO
1968

APRIL 1970

DEPARTMENT OF HIGHWAYS

HON. G.E. GOMME
MINISTER

A.T.C. McNAB
DEPUTY MINISTER

**ANNUAL AVERAGE DAILY TRAFFIC
ON THE KING'S HIGHWAYS AND
SECONDARY HIGHWAYS
IN ONTARIO
1968**

PREPARED UNDER THE DIRECTION OF THE PLANNING BRANCH

DEPARTMENT OF HIGHWAYS

H.W. ADCOCK
ASSISTANT DEPUTY MINISTER (ENG.)

W. BIDELE
DIRECTOR OF PLANNING

A.E. ARGUE
TRAFFIC AND PLANNING STUDIES ENG.

FOREWORD

The traffic volumes listed in this booklet are the Annual Average Daily Traffic (A.A.D.T.) figures for each of the sections of highway identified. They represent the total two-way traffic volumes occurring in 24 hours on the average day of the whole year.

Local conditions may cause variations in the volume within the sections of highway listed, but on the whole these sections are considered to be adequately represented by the volumes shown. Exceptions are where the volumes are followed by a "W". This indicates that the section has a noticeable range of volume within it and the figure given is the weighted average.

Seasonal fluctuations of traffic occur on almost all sections of highway, usually resulting in higher traffic volumes in summer and lower traffic volumes in winter. The amount of variation varies considerably from section to section, from highway to highway and from area to area. It is not possible to list all these variations for every section of highway and they are mentioned here only to add to the understanding of the A.A.D.T. volumes given.

In a very general way, traffic volumes in Ontario are growing at the rate of about 5% per year. Obviously, local conditions will cause varying rates of growth to occur in different areas.

All volumes marked with an asterisk are estimates only.

MINISTER**

**A.T.C. McNAB
DEPUTY MINISTER**

**ANNUAL AVERAGE DAILY TRAFFIC
ON THE KING'S HIGHWAY AND
SECONDARY HIGHWAYS
IN ONTARIO
1969**

PREPARED UNDER THE DIRECTION OF THE PLANNING BRANCH

DEPARTMENT OF HIGHWAYS

H.W. ADCOCK
ASSISTANT DEPUTY MINISTER (ENG.)

W. BIDE LL
DIRECTOR OF PLANNING

A.E. ARGUE
TRAFFIC AND PLANNING STUDIES ENG.

FOREWORD

The traffic volumes listed in this booklet are the Annual Average Daily Traffic (A.A.D.T.) figures for each of the sections of highway identified. They represent the total two-way traffic volumes occurring in 24 hours on the average day of the whole year.

Local conditions may cause variations in the volume within the sections of highway listed, but on the whole these sections are considered to be adequately represented by the volumes shown. Exceptions are where the volumes are followed by a "W". This indicates that the section has a noticeable range of volume within it and the figure given is the weighted average.

Seasonal fluctuations of traffic occur on almost all sections of highway, usually resulting in higher traffic volumes in summer and lower traffic volumes in winter. The amount of variation varies considerably from section to section, from highway to highway and from area to area. It is not possible to list all these variations for every section of highway and they are mentioned here only to add to the understanding of the A.A.D.T. volumes given.

In a very general way, traffic volumes in Ontario are growing at the rate of about 5% per year. Obviously, local conditions will cause varying rates of growth to occur in different areas.

All volumes marked with an asterisk are estimates only.

ANNUAL AVERAGE DAILY TRAFFIC

ON THE KING'S HIGHWAY AND SECONDARY HIGHWAYS IN ONTARIO

1970

ONTARIO

DEPARTMENT
OF
TRANSPORTATION AND COMMUNICATIONS

HON. CHARLES MacNAUGHTON
MINISTER

A.T.C. McNAB
DEPUTY MINISTER

**ANNUAL AVERAGE DAILY TRAFFIC
ON THE KING'S HIGHWAY AND
SECONDARY HIGHWAYS
IN ONTARIO
1970**

ONTARIO

**PREPARED UNDER THE DIRECTION OF THE SYSTEMS PLANNING BRANCH
DEPARTMENT OF TRANSPORTATION AND COMMUNICATIONS**

**W. BIDE LL, EXECUTIVE DIRECTOR
PLANNING DIVISION**

**G.H. JOHNSTON, DIRECTOR
SYSTEMS PLANNING BRANCH**

FOREWORD

The traffic volumes listed in this booklet are the Annual Average Daily Traffic (A.A.D.T.) figures for each of the sections of highway identified. They represent the total two-way traffic volumes occurring in 24 hours on the average day of the whole year.

Local conditions may cause variations in the volume within the sections of highway listed, but on the whole these sections are considered to be adequately represented by the volumes shown.

Seasonal fluctuations of traffic occur on almost all sections of highway, usually resulting in higher traffic volumes in summer and lower traffic volumes in winter. The amount of variation varies considerably from section to section, from highway to highway and from area to area. It is not possible to list all these variations for every section of highway and they are mentioned here only to add to the understanding of the A.A.D.T. volumes given.

In a very general way, traffic volumes in Ontario are growing at the rate of about 5% per year. Obviously, local conditions will cause varying rates of growth to occur in different areas.

<u>HWY. Q.E.W.</u>	<u>TORONTO TO FORT ERIE</u>	<u>MILES</u>	<u>A.A.D.T.</u>
